

# Current Protocols in Molecular Biology

Supplement 76

New and Revised Topics

October 2006

## *In this Supplement*

- UNIT 7.8 Polony DNA Sequencing (*New*)
- UNIT 10.0 Introduction to Analysis of Proteins (*Revised*)
- UNIT 10.1A Spectrophotometric and Colorimetric  
Determination of Protein Concentration (*Revised*)
- UNIT 20.5 Detection of Protein-Protein Interactions by  
Coprecipitation (*Revised*)
- UNIT 23.1 Overview of Gene Targeting by Homologous  
Recombination (*Revised*)
- APPENDIX 3D Quantitation of DNA and RNA with Absorption  
and Fluorescence Spectroscopy (*Revised*)

## *Coming Soon*

Analysis and Management of Microarray Gene  
Expression Data (*New*)

Evaluation of Glucose Homeostasis (*New*)

This supplement includes important new topics to bring your CPMB subscription up to date with the latest methodology. Also included is a reader response card for forwarding us your comments and suggestions. Please see next page for a full listing of contents and instructions for inserting pages.

Visit our home page at:  
[www.currentprotocols.com](http://www.currentprotocols.com).

If you have questions about your subscription, call  
Customer Service at 800-825-7550

### **Routing List**

After filing, you may wish to route this cover sheet to other Current Protocols users to keep them informed of the new topics.
