

I^PHOTO IN 10 STEPS

1.) **Open** iPhoto.
2.) **Connect** your digital camera to your computer using a USB cable.
3.) When your camera appears in the iPhoto window, click the **import** button to transfer photos from your camera to the iPhoto library.
4.) In the photo browser, click the photo you want to edit.
5.) Click the **rotate** button to rotate photos by 90-degree increments.
6.) Click the **crop** button to edit a photo by keeping only the portion you like and removing the rest, or click the **red-eye** button to reduce the appearance of red-eye in your photo.
7.) Click the **retouch** button and drag the crosshair pointer in short strokes over blemishes and other small marks you wish to remove from the photo.
8.) Click the **effects** button to display the visual effects you can use on your photo.
9.) Click the **enhance** button to automatically adjust the color and contrast of a photo, or click the **adjust** button to display advanced editing tools that allow you to edit your photos manually.
10.) Click the **done** button to leave edit view and return to your photo library.
